Distance probability in bins without a precise new-sky reference
Cell means for the main candidate; — means no candidate object. Original numerical flags retained.
Main candidate | W1 unavailable
Main candidate | W1 signed SNR < 5
Main candidate | W1 SNR >= 5

Same observable cell and distance bin; any precise source makes a bin nonempty. The complement is not validated probability.
All native DR11 TYPE=PSF. Fixed lower-inclusive cells; zero is observed zero, not missing data.
