Descriptive membership comparison after the frozen structure fit

All 512 selected objects | published membership available: 119 | published p >= 0.9: 96

Membership information does not select the sample, fit the likelihood or update the shared posterior.

Joint numerical acceptance: Full likelihood = False | Gaussian summary = False

Missing published membership stays missing. Published probabilities are model outputs, not independent hard truth.

Seen-system reference-ensemble demonstration; separate from the corrected target candidate and new NGC1261 evaluation.
