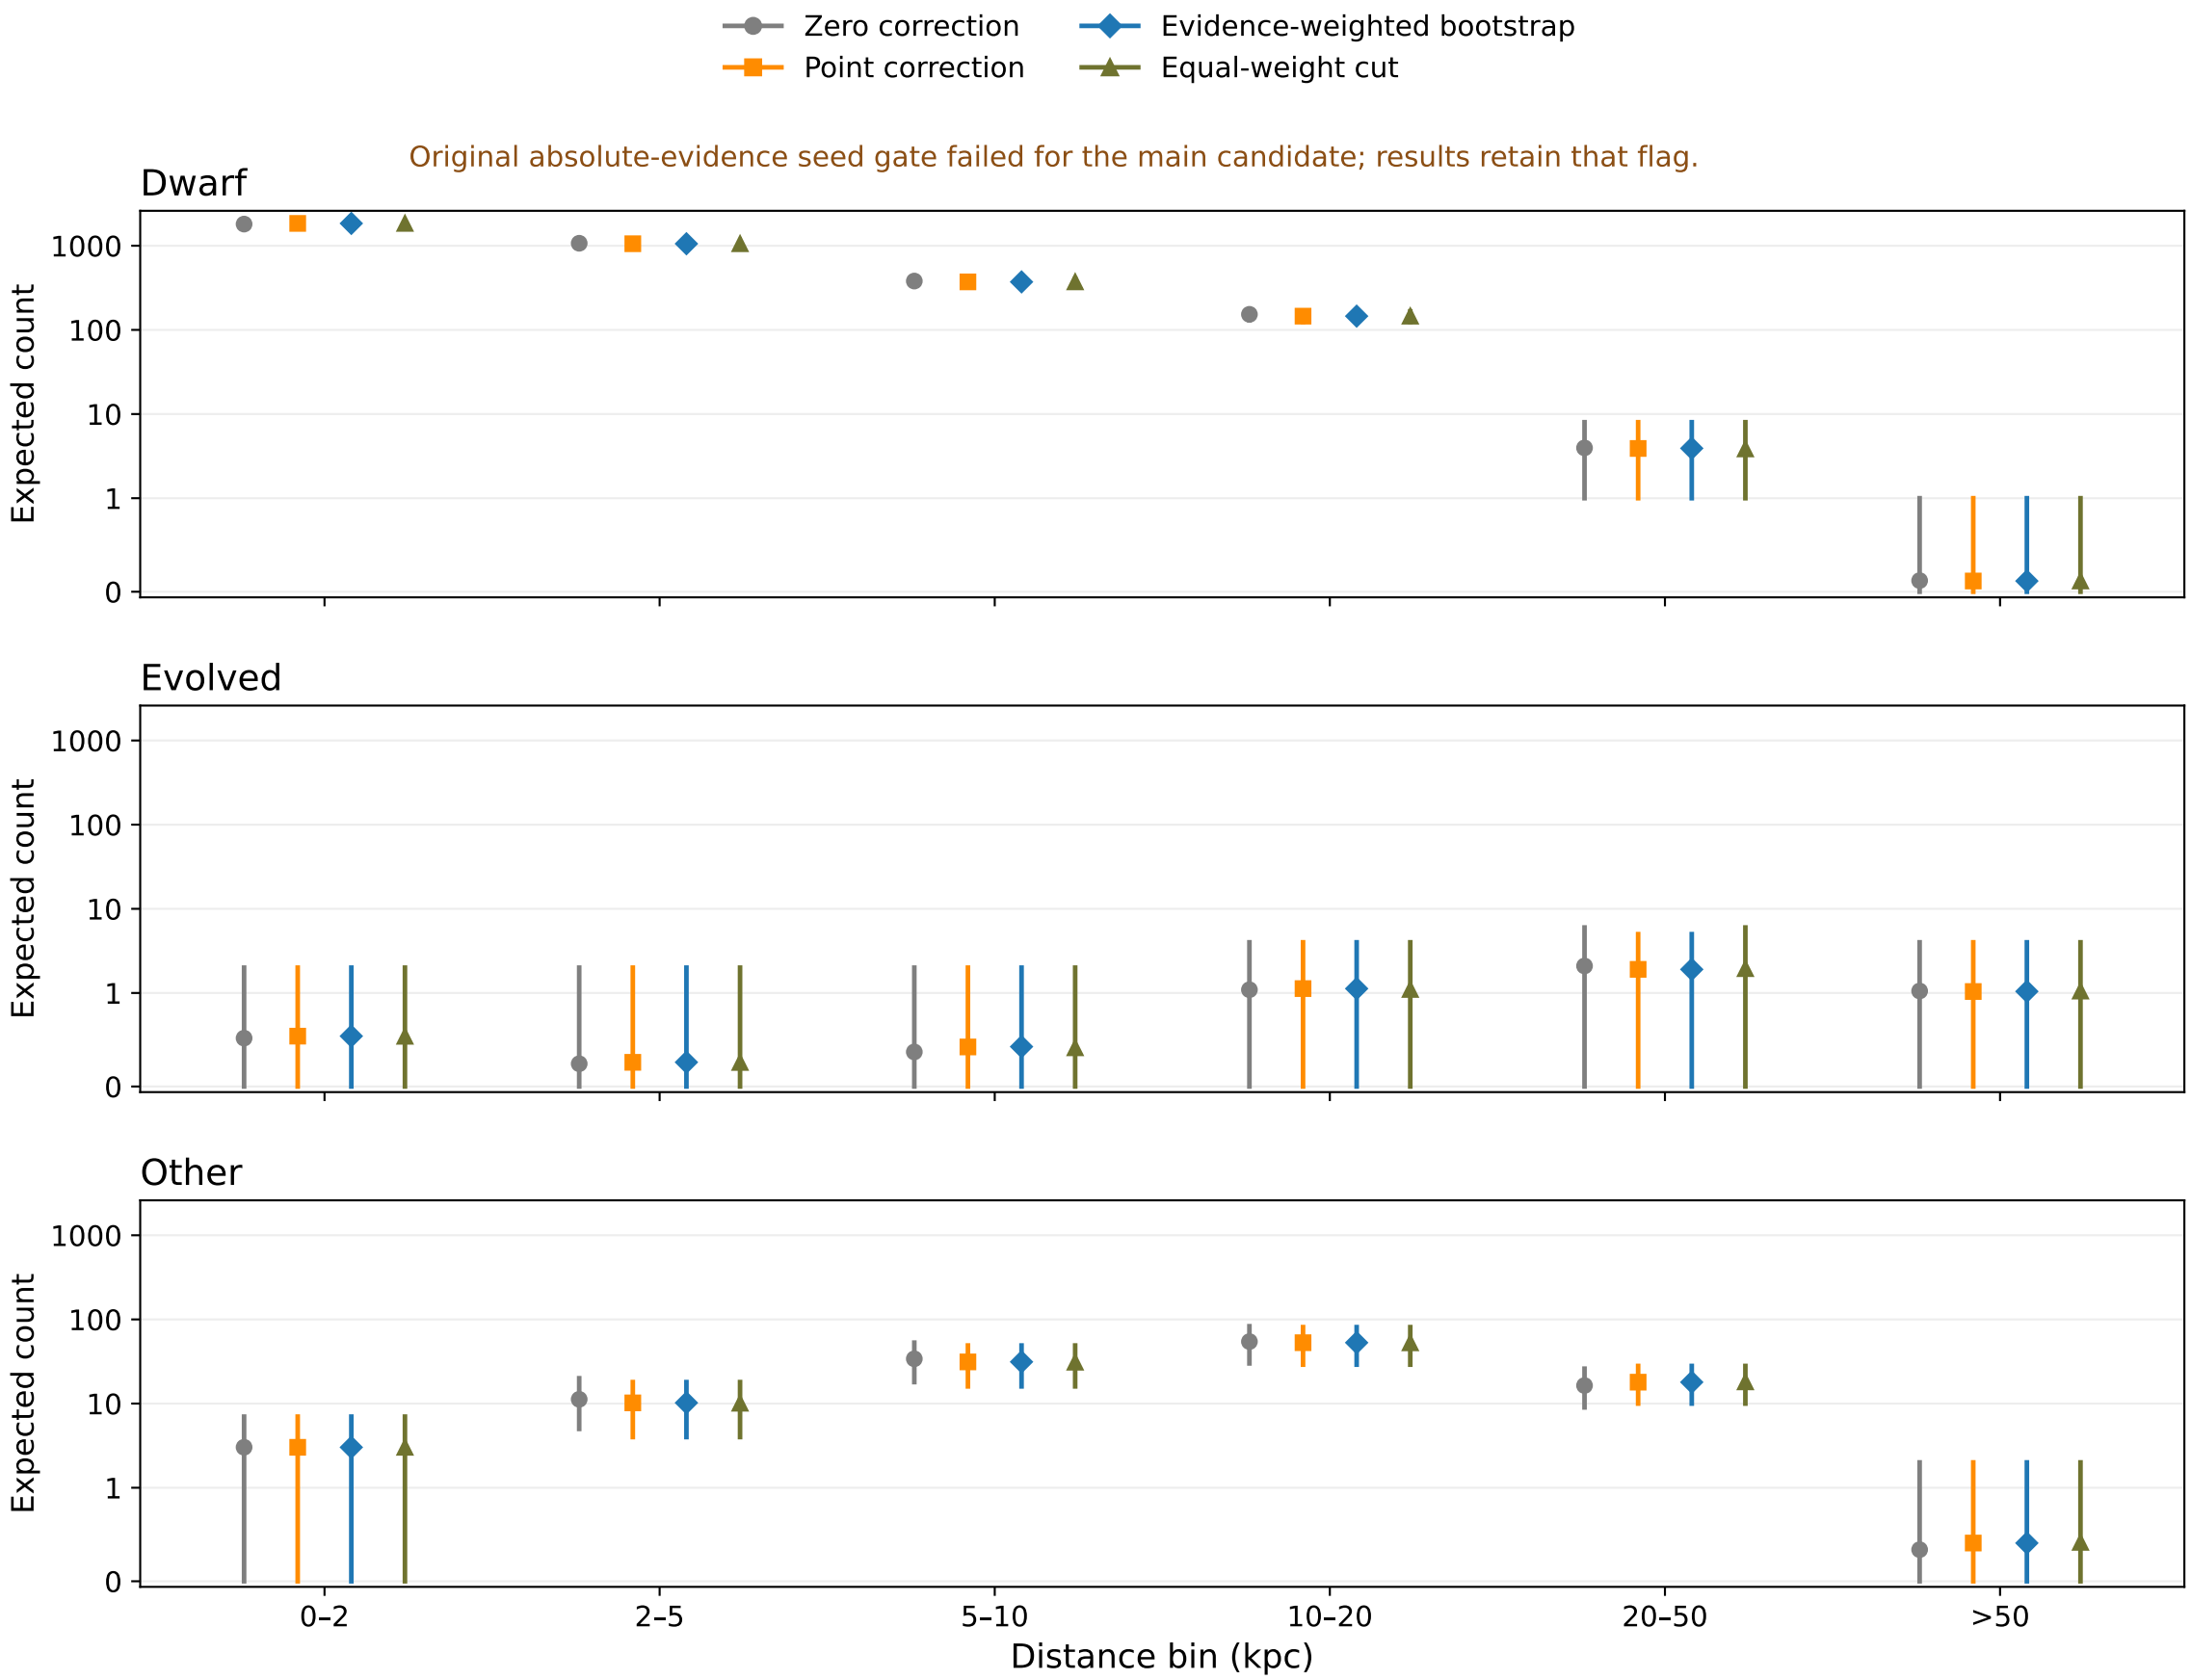
Conditional candidate class–distance counts

3540 observed native DR11 PSF objects | fixed response12 / calibration12 | shared global draws



Points: conditional expectations. Bars: 95% realized-count intervals from shared Monte Carlo catalogs.

CDF half-sample discrepancies (legend order): 0.0310, 0.0330, 0.0280, 0.0261. Y scale is linear below 1, logarithmic above.

Conditional model counts, not measured populations or physical densities. External validation remains pending.
